

**LINUXUP**™

## Installing Your Linxup 1200 Wired Device

### Prepare for the Installation.

To prepare for the installation you will need to:

- Review product and parts: Your shipping package should include the Linxup 1200 Wired GPS Tracker.
- Gather needed tools/parts. Needed tools may include: Screwdrivers, Wire Strippers and Cutters, Crimping Tool, Zip Ties, and Screws.

### Install the Device.

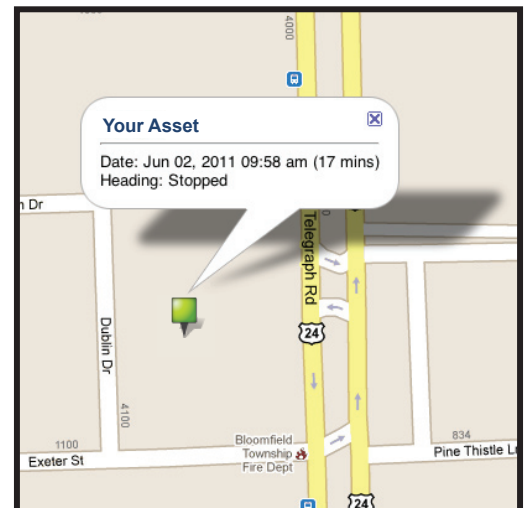

Wiring the device is an easy installation. The Linxup 1200 has a series of wires, you will only need to attach two of these wires (the additional wires are for future features or functions). The two wires you need are: the Red Wire (Power), and the Black Wire (Ground). Follow these steps to install the device:

1. Find the constant Red Power Wire on your asset. Cut and strip this wire.
2. Cut and strip the Red Wire on the Linxup 1200 GPS device.
3. Connect the two Red Wires and crimp. This connection provides power to the device.
4. Strip the Black Wire on the Linxup 1200 GPS device.
5. Connect the Linxup Black Wire to a grounded source.
6. Using screws or plastic zip ties as appropriate, secure the device to your asset.

### Confirm the Power Connection.

Following installation, allow 5-10 minutes for the Linxup device to power up, then use the LED indicators to ensure that you have good power source.

### Your Installation is Complete.

#### **PLEASE NOTE:**

Your device monthly service plan is active upon delivery of the devices, not installation.
